

**OUR MOUTH IS NOT...**

**...A TOXIC DUMP !**

Every tooth filling contains **1 g of mercury**,  
**the # 1 global contaminant !**

**Mercury vapor** continuously releases.

Mercury accumulates progressively in **brain**,  
**kidneys**, and in all organs...

Tooth fillings = **main source of mercury exposure** in Western countries (WHO, 1991).

Dental mercury is by far the **main contributor of mercury burden** in the body.

*For medical reasons, amalgam should be eliminated in dental care as soon as possible.*

*Maths Berlin, Swedish official report, 2003*
