

Mercury, babie's enemy

Dental mercury
crosses
placenta

Mercury accumulates
into fetal **placenta**, **liver**
and **brain**.

Dental mercury
comes into milk

The more amalgams the mother has, the more
mercury baby's brain contains.

Early exposure to mercury
→ **loss of IQ points**
→ **risk of development troubles**

With reference to the risk of inhibiting influence on the growing brain, it is not compatible with science [...] to use amalgam fillings in children and fertile women.
